

This manual cannot be redistributed without permission from joomla-monster.com

Visit the official website joomla-monster.com of this Joomla template and other thematic and high quality templates.

Template Features

All the template features can be found in the [„Template Features“](#) article on demo site.

1. Module positions

This template contains 8 module positions.

2. Module Suffixes

This template contains 2 module color options (1 default + 1 suffix)

3. Typography

This template provides you some custom styles for several tags. To reach an expected result, an appropriate class must be entered to a proper tag as examples shown in the article.

4. Template parameters

This template provides some back-end parameters to simplify template management.

Template Extensions

This template includes css styles for our Joomla extensions:

1. DJ-Menu

Visit <http://dj-extensions.com/extensions/dj-menu.html> to read manual and download the latest version of DJ-Menu.

2. DJ-Image-Slider

Visit <http://dj-extensions.com/extensions/dj-image-slider.html> to read manual and download the latest version of DJ-Image-Slider.

The default description position of slides of DJ-Image-Slider component is on the bottom of the container.

If you would like to get the same result like on our demo site (module at "header" position), you have to set the width and the position of the description box in the advanced parameteres tab of the DJ-Image-Slider module.

Read manual for the details.

► Basic Options

▼ Advanced Options

CUSTOMISE SLIDE DESCRIPTION

Description width

Description vertical position

Description horizontal position

We have also used a hack to get the same height of description box in relation to the slide height. Just put a slide description text inside a div as follows:

```
<div style="height: 185px;">  
    Lorem ipsum dolor sit amet, consectetur adipiscing elit. Vestibulum vehicula pulvinar  
    lacus non dictum. Sed scelerisque nibh in dui suscipit elementum.  
</div>
```

Important:

Remember to edit the slide description in html mode if you would like to use the hack. Enter the proper height for div if your slide height is different than in our demo site (245px).

Custom Modules

The demo site contains custom modules on "bottom" position. If you would like to get the same result, you will find all necessary images in the images-for-bottom-modules.zip package.

If you don't know how to create a custom module, read the article:

[http://docs.joomla.org/How do you create a custom module?](http://docs.joomla.org/How_do_you_create_a_custom_module?)
