
Love the new AJAX latest post module

Posted by scorch - 2007/06/05 19:09

Great job on this new AJAX module. It looks really nice! I installed it on one of my sites and it worked great. Just so easy!

Very nice indeed but..... I can't get it to work in IE7, it keeps loading. In Firefox it works great!

Same here, just noticed that a while ago.

Anyone know how to fix this, or use of another module?

Hi !
Did some body found tue probleme of UTF8 encoding?, because I have a french site and the french caractere doesn't work.
Thanks!

Look at /modules/latest_fb_X/attach.php line 170-178, maybe the problem:

```
//$content = mb_convert_encoding($content, "UTF-8"«Â»);
```

```
$content = eregi_replace("ä", "a", $content);  
$content = eregi_replace("Ä", "A", $content);  
$content = eregi_replace("ü", "u", $content);  
$content = eregi_replace("Ü", "U", $content);  
$content = eregi_replace("ö", "o", $content);  
$content = eregi_replace("Ö", "O", $content);  
$content = eregi_replace("ß", "B", $content);
```

I had edited the above code, the original are some unreadable characters in my language (Chinese), you may try comment them out .

I've noticed that when you have another ajax module ont he same screen it conflicts with this one, and it will make it stop working.

I've seem to have the same problem, I got a modul in AJAX that shows logged in users. Anyone knows how to get around the problem.
