## joomlaboard to fireboard

Posted by vlsi - 2007/05/02 14:29

---

Hi friends,

I was searching for the procedure to change my joomlaboard to fireboard at bestofjoomla.com. I could not find any. Can any one point me please where it is available? I am pretty sure that it will be in the website, but I could not find it. Sorry for any inconvenience.

Thanks in advance

The Fireboard install already has a Joomlaboard converter in it. After install is complete and you enter the Fireboard admin area for the first time, it will prompt you to either import from JB or install demo data. Just click the import from JB button.

hi,

just i tried to install. i was getting 10s of warning message and finally it was saying that "intall failed".

Should i uninstall JB before i intall FB?

thanks in advance

Whatever you do, DO NOT uninstall JB!

It looks like a permissions problem when the script tries to check for the existence of a directory.

hi,  
I tried again. I have correct permissions for the folders as follows.

media/ Writeable  
administrator/components/ Writeable  
components/ Writeable  
images/stories/ Writeable

still i get the error messages as in my previous post.

any kind of info appreciated

hi,  
it was not a problem with fb. i was looking in joomla.org.  
i found the following link. it was problem with host change.  
<http://forum.joomla.org/index.php/topic,151855.msg736770.html#msg736770>  
i guess this could help for ppl who has similar problem.
