
How do I edit the tooltip format?

Posted by jezza2 - 2007/05/11 10:43

How do I edit the tooltip format? I don't know what the protocol is. Currently my tooltip format box has "%F > %L" in it. What are the other options and where can I find more information about them?

Thanks

Greetings jezza - if you hover over the tooltip subject on the left of the input box, a message should popup telling you this: %S - short subject, %L - Full subject, %N - Name, %D - Date, %F - Forum - That should give you plenty of options for what you need.

Good Luck!
