Hello everyone,

I wish you all the best of luck. Anyway, I'm about to finish the UTF-8 encoded, Arabic translated arabic.php language file for FireBoard. Sill-to-come in the next few days with the launch of my new website, I'll be launching a new RTL modified template for FireBoard.

Try the attachment below and tell me whats missing or what do you think.

01. Download the attachment below.
02. Upload it to your Joomla directory, for example  
[http://www.yourwebsite.com/joomla/administrator/components/com\\_fireboard/language/](http://www.yourwebsite.com/joomla/administrator/components/com_fireboard/language/)
03. the Arabic language will be automatically chosen if its your Joomla's default language.

Stay tuned for more insider updates.

Sorry guys, I don't know what happened to the attachment file. I think there must've been something wrong with the forum configurations or something. I'll check it out and fix it.

Thank you
