
Is Badwords component Necessary to view posts?

Posted by Loricwr - 2007/07/07 21:37

I just installed fireboard to my Joomla site and everything seemed to work just fine until someone added a couple posts. I went to view the posts and I only get the error below:

Warning: require_once(components/com_badword/class.badword.php) : failed to open stream: No such file or directory in XXXXXXXXXX/components/com_fireboard/template/default/view.php on line 31

Fatal error: require_once() : Failed opening required 'components/com_badword/class.badword.php' (include_path='.:usr/lib/php:usr/local/lib/php') in XXXXXXXXXXXXXXXXXXXX/components/com_fireboard/template/default/view.php on line 31

Is Badwords component necessary to view posts in Fireboard?

Thanks,
Lori

If you want to enable badwords in the admin panel for Fireboard, yes, you must install badwords. You are getting this error because you have it turned on but not installed. You can go into the FB admin panel and disable badwords and the error should go away.
