
Future releases of Fireboard question

Posted by tjay - 2007/07/28 15:39

Will future releases of Fireboard continue to be GPL?

I note the last public release states GPL in the files, GPL is listed as the license on the extensions directory.

But there is not a notice for future releases on the site home page or documentation.

With all the hubub about developers and projects staying with Joomla and moving forward to 1.5 can we expect Fireboard to be there?
