
Access Levels

Posted by Hazzaa - 2007/07/30 20:06

I have 6 different access levels. I have forums set up to be viewed by level 1 and up, level 2 and up, level 3 and up and so on. Levels have been set up with jacplus. This feature does not seem to be working correctly. It seems to be working quite opposite. The higher levels can not see what the lower levels are seeing but the lower levels can see what the higher levels can see.

In my live site, I have the Jacplus fix loaded and it works great.

I think it maybe picking up on the levels but not reading them correctly.

An easy fix for this is to make the levels option a multi select. Then you can choose all levels that a forum can be viewed by. This would also help in being able to skip a level if you DON'T want a middle level to view a certain forum.
