
[FIXED]No smilies and rank images in Backend

Posted by LocaliceR - 2007/07/28 08:37

When I use a language file, the URLs of the smilies and rank images are missing. Just noticed it is because of only the English image set was used. When I created a copy of it and named it as the language file, then the smilies and images became visible.

It would be great to check this somehow and inform the novice users about this issue.

I think it working as it should be.

So you can use language specific smilies and rank images.

just put the smilies and the rank images in the language subfolder and everything should work.
