## Foul Filter mambot

Posted by LocaliceR - 2007/08/04 12:57

---

Just gave a try to Foul Filter mambot. I was curious at whether the bad words submitted in FB posts are filtered out and man, it worked.

I recommend you it if you worry of such words.

I couldn't get this to filter in Fireboard. Did you? Or does this module filter only site content as opposed to Fireboard postings?

Thanks.

Well, first it really replaced the matching words with \*\*\*\* , it was with the default words. When I added some other words, it didn't work :( I was glad untimely.

Playing more with Foul Filter, I resolved its trick. Well, it works! But only when the bad word is in a sentence. When you enter only a bad word, it won't be censored. Neither in the subject.

Hi there,

what did you do exactly to get this foul filter to work. I have installed the latest (1.03) foul filter and published the mambot and when I search the posts are shown with the bad words showing.

If you view in the forum these disguised as I am using badwords 2...

any news on what tinkering you have done would be appreciated.

Thanks
