## Quick Reply not working

Posted by jpinhb - 2007/08/17 01:05

---

The Quick Reply feature is not working on my board.

Anytime someone hits submit after entering a Quick Reply they get the following error:

"You forgot to include your name. Click your browser's back button to go back and try again."

There is no place to enter a name so I'm not sure why this is happening.

Any ideas?

I am running

FB 1.0.1

J! 1.0.12

CB 1.2

If there are no ideas regarding what might be happening or how to fix it, can anyone suggest the best way to remove the Quick Reply option?

It seems I may be the only one having this issues. I'd still love to find a fix, but in the meantime I did find a way to disable the Quick Reply feature.

Just in someone else is having the same problem here is what I did. Note: by no means am I a PHP developer so I didn't want to mess with the code on my own and mess something else up by accident.

I replaced the Quick reply image with a white image that is 1 px x 1 px.

The image was in the following dir: components/com\_fireboard/template/kimkin/images/english/icons/quick\_reply.gif

I'm using the Kimkin template so obviously you'd replace that with whatever template you are using.

Also having the same problem. The regular reply works fine, just the quick reply is bunked.
