
Date Problem

Posted by Sam009 - 2007/08/19 21:44

Hello I have a problem with the date in my FB!
It shows 20. however it is the 19.
Can someone help me?

Some date output seems not to use the full timezone information...

There's a need to rewrite the data output - at least optimize it for full localization.

If you'd present all information about this issue (where exactly? in which exact reproducible case?) i'd open a ticket at least...
But as long as it is that general, no one can really check, reproduce or fix the reported issue...

cya

I also reported at http://www.bestofjoomla.com/component/option,com_fireboard/Itemid,38/func,view/id,18343/catid,69/

The time is corrected after the change time in server. This BOJ forum will show incorrect time.

The core team should give a good solution for this.

I was looking for a related ticket, nothing remaining found.

Since this is a very general problem (and already core team agreed that there's a need to upgrade the code for timezone related information), i posted it as a general bug ticket.

Sorry, that's pretty much to do. I expect we need a rewrite.
I suggested some starting point...

Ticket:

http://joomlancode.org/gf/project/fireboard/tracker/?action=TrackerItemEdit&tracker_item_id=6661

Sadly.. i don't know where the solution of this problem could be found on the timetable.
Please wait .-)

Recent seams to work but not the latest.

I have tried to change the joomla CP config to different time zones with no effect also manually in the confiuration.php (time offset, server offset). In my case it differs 8 houers.

Tried to change to UTC 00.00 but no change.
I run FB 1.0.3 so i tried a clean install of FB 1.0.1 and nothing changed.

Could it have something to do with ../joomla/components/com_fireboard/sources/ fb_timeformat.class.php?

Next update will consider date formats all over.

Please update as soon as it is available :-)
Already a lot of work has been done on the codebase related to this.

GrEeZ! Miro

ok.. thanks for the answer :)

I guess a workaround is to extensive that just to change in some .php document. I'll wait on the next release.. hope it's not gonna take to long..

or if you have a nightly build i would be more than happy to test it ;)
