
Forums don't display when using JACLPlus

Posted by iuebel - 2007/08/30 08:55

I am using Joomla 1.0.12, Fireboard 1.0.1 and JACLPlus 1.0.12

The JACL groups worked with JoomlaBoard ok. Now that I upgraded to Fireboard, the groups do not seem to work.

Using JACLPlus I have added a structure under Registered as follows;

- Registered (Public, Registered)
- Reseller (Public, Registered, Reseller)
- Company 1 (Public, Registered, Reseller, Company 1)
- Company 2 (Public, Registered, Reseller, Company 2)

I have my forums set up in a similar manner (from Fireboard Administration Screen)

```
. Category / Forum ..... Public Access
1 Product Support Forum .. Everbody
2 ... L Product Forum 1 ..... Everybody
3 ... L Product Forum 2 ..... Everybody
4 ... L Product Forum 3 ..... Everybody
5 ... L Product Forum 4 ..... Reseller
6 Reseller Forum ..... Reseller
7 ... L General Forum 5 ..... Reseller
8 ... L Private Forum 6 ..... Company 1
9 ... L Private Forum 7 ..... Company 2
```

As a super administrator I see all the forums, but when I log on as Company 1 (has public, registered, reseller, company 1 access groups allocated to it) it only shows the public groups.

As I said earlier - this worked fine using JoomlaBoard.

Any Ideas?

Ian

Did you create Access-Level?
In my former FB 1.0.1beta JACLplus works perfectly.
