## Posting by specific user class.

Hello,

I'd like to have my forum publicly available, but only allow posters of a particular JAACLPlus group post. I have the JAACL integration installed, and everything is working fine to the extent that I can lock a forum down for access only by a specific group.

However, I can't find an option to allow public read but JAACL Usergroup controlled posting.

If I set the forum for a specific user group, then only those users can even see the forum.

Any suggestions?

Thanks,

Glen Chancy
