
Official Bug Thread for FireBoard v1.0.1

Posted by whouse - 2007/05/23 22:29

This is the Official Bug Thread for FireBoard v1.0.1 ONLY. Please read the following and be aware that any post that does not conform will be deleted promptly.

- 1.) This thread should contain only verified bugs; bugs that have been verified by more than one source.
- 2.) The bugs posted here should have another thread in this category where it has been discussed and verification can be tracked.
- 3.) Any bug posted here should contain a link to the discussion thread of the bug being posted.
- 4.) Also, this thread is NOT for discussion of the bugs. Any post made here just inquiring about a bug or asking a question or anything other than posting a bug referenced in a discussion thread will also be deleted.

Once again, if the posts made in this thread do not conform to the above requirements, they will be promptly deleted without warning.

Thanks!

whouse

userlist avatars error

-the last uploaded avatar from a user is used for every new user that has no avatar.

Fixed on SVN Thanks...

Threaded mode broken

Posted by fatpat - 2007/05/25 19:20

Threaded mode does not work. Selecting any message in the thread list generates either a "An invalid post id was requested." error, or redirects to the root forum page.

Forum thread link

Fixed on SVN Thanks...

the unread-icons-not-appearing problem as reported for version 1.0.0 still exists in 1.0.1. Though I must say that it now appears less often, so some progress has been made, maybe without knowing.
Bevore none of the new posts would show up on my forum, now, after the upgrade, I can see all the new posts if I visit the forum from time to time and remember to close my browser after visiting the page. The only times I had the problem was when people posted while I was on the forum, and when I kept the browser running with the page open.

Set My Avatar - Profilebox (BUG FIX)

Posted by Legoland - 2007/05/30 03:07

PROBLEM: EXCESS OF TABLE TAGS, MESSING UP WITH THE SITE TEMPLATE.
SOLUTION: REMOVE BOTH OF THE CODE BELOW.
LOCATION: components/com_fireboard/template/default/
FILE: avatar_upload.php

LINES: 58-61
CODE:

I COULD NOT INSERT THE TAGS: slash td, slash tr, slash tbody and slash table.

and

LINES: 327-330
CODE:

I COULD NOT INSERT THE TAGS: slash td, slash tr, slash tbody and slash table.

Keep on the good work guys.

Legoland.

P.S. The code insertion is NOT working.

http://www.bestofjoomla.com/component/option,com_fireboard/Itemid,38/func,view/id,9290/catid,66/

Posts that have already been read show up as unread after the next login.
Sometimes all the threads in a topic have been read and the topic shows up as NEW on the view category page.

This is a serious bug...

Unable to access "Forum Administration"

Avatars problem

Posted by garfield - 2007/06/12 00:24

Profile editing form and the profilebox always think that the current user avatar is one that listed in `***_users/avatar` field of the Joomla! database.

When I upload a new one the correct value is written into `***_fb_users/avatar` and it allows to display correct avatar in messages but nothing is changed in `***_users/avatar`. So when I open the profile editing form I see the no avatar message or one that was previously set through other Joomla! components. And if I press the "Update" button I again see in my messages the avatar from `***_fb_users/avatar` or no avatar at all if this field is empty.

The same is for users signature. The profile editing form displays one from `***_fb_users` and the message itself display the signature from the other field.

Prevent FB to capture reg-only Itemid's

Posted by rybik - 2007/06/19 21:40

Prevent FB to capture reg-only Itemid's

For some reasons i want to show the link to comprofiler only for registered users, but the links in the Welcome message are still looking for this menu item.

file (patched):

class.fireboard.php starting from line 39

```
//Community Builder
if ($fbConfig)
{
    $query = "SELECT id FROM #__menu WHERE link = 'index.php?option=com_comprofiler' AND published=1 AND
access gid; // fixed by rybik
    $database->setQuery($query);
    $CB_Itemid = $database->loadResult();

    define("FB_CB_ITEMID", (int)$CB_Itemid);
    define("FB_CB_ITEMID_SUFFIX", "&Itemid=" . FB_CB_ITEMID);
}
```

I don't know if there's any other place to fix, but this one works.

Posted by Jo_shi - 2007/06/21 14:02

I don't know, if this is the right place but I want the developers to point at this issue. This Forum here has a different version. But here the memberlist and the sorting is very corrupted.

Please have a look at this issue.

Greetings Jo_shi

Flood protection will not allow posts if set to anything other than zero.

The thread is in the v1.0.0 section but also applies to v1.0.1.

Re:Official Bug Thread for FireBoard v1.0.1

Posted by goldman - 2007/07/26 16:31

Hi,

I create some bugfix for "Show recent messages" - it propably should

sort last messages in chronologic order (sorted by datetime of message).

To fix that modify your components/com_fireboard/template/default/latestx.php file in about 66 line to:

```
// get all the threads with posts in the specified timeframe
$database->setQuery("SELECT MAX(c.time) AS msgtime,a.thread,b.subject FROM #__fb_messages AS c LEFT JOIN
#__fb_messages AS a ON c.thread=a.thread LEFT JOIN #__fb_messages AS b ON a.thread=b.thread WHERE a.time
>'$querytime' AND b.parent=0 AND a.catid IN ($ResultSet) AND a.moved != 1 GROUP BY a.thread ORDER BY
msgtime DESC LIMIT 100" );
```

Enjoy :laugh:

Wrong version number showing in component list.

A: what you need to do is:

- open 'fireboard.xml'
- go to line 9
- find 1.0.0 - beta
- change to 1.0.1 - beta

Wrong version number showing in adminpanel

A: what you need to do is:

- open 'fireboard_config.php'
- go to line 103
- find \$fbConfig='1.0.0-beta';
- change to \$fbConfig='1.0.1-beta';

Good luck :D

Unable to add a new category

Posted by kohyin - 2007/08/02 01:35

I installed FireBoard v1.01 and migrated JoomlaBoard database to it. I love FB, but it fails to add new categories correctly. As soon as I add a new category, lots of "...." shows up before all the existing categories and ends up in the following error message

when I try to edit the category:

```
"Fatal error: Out of memory (allocated 33292288) (tried to allocate 16487 bytes) in
/joomla/administrator/components/com_fireboard/admin.fireboard.php on line 1579"
```

What is SVN? Can you provide a link to the fix please?

Permissions do not seem to work correctly

Posted by iuebel - 2007/08/30 14:59

When you assign a permission say registered to a forum or category they do not appear even though the user has that permission.

It was stated that 1.0.1 supported JACLPlus but these permissions seen to fail also.

Relevant threads

Setting permissions to "Registered" also needs admi

Forums don't display when using JAACLPlus

Trouble with forum permissions -Edited + Updated

Note - the bug Fix in the 3rd thread above did not fix this problem with permissions

Re:Official Bug Thread for FireBoard v1.0.1

Posted by GregMon - 2007/09/03 02:29

I have just installed Fireboard 1.0.1 and it was running well within the default template of my Joomla installation

Problem started when I 'assigned' a different template (with a wider content area) for the Fireboard page.

Everything appears to work well until I click on a "Recent Post" Topic or on any of the links within "General Stats" then the template would revert back to the default template (not the assigned template).

Only when I click the "Forum" link will the Fireboard page reuse the 'Assigned' template again.

This is driving me nuts... any solution to this (the bug, not my being nuts)?

Greg
