
Fireboard Bug Report - Checklist

Posted by palebluedot - 2007/09/03 15:17

I made this primarily for my own testing purposes but wanted to release it to others. It is still a work in progress, but the back-end report is basically ready. It is created on Google Docs, so if you have a Gmail account, you are welcome to help me edit and refine it. PM me your gmail address and I'll add you to the project. You are welcome to create your own versions and post them here as well. Let me know and I can add them to the top post.

Basically its a item-by-item checklist intended to test Fireboard in a more systematic way. Start at the beginning and work through each function seeing if it produces the desired result. Once you have a completed report, you can post it here in this thread as an attachment. As new releases/SVNs become available, check your current list with the new FB version and make adjustments. If there are changes, add/remove as necessary. Since this is a spreadsheet, you could create separate tabs for each revision and keep track of bugs that have been around for a while or possible crept back into the code.

I will start working on the front-end part of it tomorrow. Today is Labor day in the US and I will be away with my family.

The latest version of this document can always be seen at:

<http://spreadsheets.google.com/pub?key=p4YUh8BVYUBCF3loOCssNPA>

Here is the document in Excel format. <http://www.bestofjoomla.com/images/fbfiles/files/FireboardTestSheet.zip>

If you don't have Excel, you can get a Google Docs account at: <http://docs.google.com/> and open this file in a spreadsheet editor, right in your web browser. This is a free service from google. You can also get the free office suite, Open Office, at: <http://www.openoffice.org/>
