
error when reading a post

Posted by Figster - 2007/09/04 18:07

Just installed Fireboard 1.0.0 everything went smooth. I installed the sample data, went int the forum management and set up my categories, etc.. Linked it to my user menu it looks great until you click to read a post. I can create a post ok, but when you go to try and read one I am getting this error:

FireBoard
ForumMy ProfileRulesHelp

Warning: main(components/com_badword/class.badword.php) : failed to open stream: No such file or directory in /home/newton/public_html/components/com_fireboard/template/default/view.php on line 31

Fatal error: main() : Failed opening required 'components/com_badword/class.badword.php' (include_path='.:usr/lib/php:usr/local/lib/php') in /home/newton/public_html/components/com_fireboard/template/default/view.php on line 31

I am using the default green template. What is causing this error? Your help is appreciated.

Well, when I turn off the bad word filter it now works. However there are these ugly links:
_GEN_GOTOBOTTOM Post Reply Subscribe Favorite to this topic Favoured: 0.

and the _GEN_GOTOTOP is the same way. Do I need to modify something in the default green template?
