## Error when trying to Edit Basic Forum Installation

Posted by danielstief - 2007/09/06 01:55

---

I upgraded to FireBoard 1.0.3 following the upgrade instructions.

When I make changes to the Basic Forum Installation and try to save, I get this error message:

```
fbforun::store failed Unknow column 'class_sfx' in 'field list' SQL=UPDATE jos_fb_categories SET 'parent'='0', 'name'="TRANSISTIONS", 'locked'='0', 'moderated'='0', 'pub_access'='0', 'pub_recurse'='0', 'admin_aces'='25', 'admin_recurse'='0', 'ordering'='2', 'review'='0', 'description'=', 'class_WHERE id='3'
```

---

---

This sounds like a database problem. Check PHPMyAdmin and see if you jos\_fb\_categories actually has an entry for class\_sfx

---

I checked and there is no entry for class\_sfx.

When I upgraded - I just ftp'd the new files as the installation instructions said. I did nothing with the database.

---

Read the install manual and run the appropriate SQL statements for your specific upgrade scenario.

---

The SQL files are in a folder called "Upgrade" which is part of the release zip file
