## Solved - How to purge fireboard tables?

Posted by Techmaster - 2007/09/06 04:29

---

I installed 1.0.0 but hadn't gotten to do anything with it yet, and tonight rather than going through the long procedure to upgrade, I uninstalled the old one, and installed 1.0.3. Well, now certain things just aren't working right, like when I try to add a forum I'm getting SQL errors. What tables does fireboard create exactly? I'm thinking I'll uninstall it again, purge the tables it creates, and try again. Thanks!

Read the VERY NICE PDF document that is included in the zip file, it will answer your question.

Nevermind, I figured it out. All the Fireboard tables begin with "jos\_fb\_". I uninstalled Fireboard, dropped all those tables, and reinstalled. I then went to Components, Fireboard and clicked on the button to do a new install. So far it seems to have fixed the problems I was having.
