
[Solved] Ranks problem (foreach error)

Posted by Jvuz - 2007/09/06 13:28

When I try to change the rank names I get:

Invalid argument supplied for foreach() in
/opt/www/vanattenhovenj/web/test.herenvanzichem.be/administrator/components/com_fireboard/admin.fireboard.php on
line 2152

How can I solve this?

Jvuz

You are using some other language than english. So go in /components/com_fireboard/template/default/images/ or what
template you are using and copy that "english" -folder(and files) and then paste all folder (include files)that language
name what you are using. Example my folder name "finnish". Then you dont come that warning and images show?

Regards,

Sami

You are using some other language than english. You mean for the site (yes) or for the forum (no)?

Try to rename that english that other language what you are using. I do new folder for that and all going well without
errors... so I have there english and finnish folder (same files but different folder name)

Also if you are using French, German, Hungarian or Italian language that is ready in
"LanguagePacks_Fireboard_Forum_1.0.3" -packages for these languages... you find that in installation packages.
