when I want to install this plugin I recieve this message :
Plugin version (1.0.2) different from Community Builder version (1.0.1)

If it is possible please release a plugin for the Community Builder version (1.0.1)

Thanks

Unzip the plugin archive file and open the .xml file in the plugin folder. Alter the x.x.x line to read 1.0 RC or whatever your version is.

First thanks for this plugin!!!!

I am having one issue with it. The posts are not showing up, but the subscriptions do. Anybody have a thought on this.

Thanks in advance for the help

Oh I am using Fireboard 1.0.1, but I am under the understanding it should work with the latest beta.

Download the zip file, then from the backend, go to Components, Community Builder, Plugin Manager. Once you're in the Plugin Manager, click on Install Plugin and browse for the file.

I don't believe so. I have installed both of the CB plugins and it only partially works with the same set up. It displays the messages posted by the user in the profile, but not the stats or number of posts. The unsubscribe from a thread does not work, nor do the changing of the view type and sort order.

There were also issues with the tabs in the profile only displaying the variable name. I corrected this by going into the CB language file and updating the variable names from UE_SB_XXXXX to UE_FB_XXXXX.

If anyone has a solution and can post it, that would be great. I will be taking a closer look at it myself when I have the time, however, I am a noob when it comes to php.

I spoke to soon... the changing of the view type and sort order does work... it just doesn't show up on the fireboard user admin, but it works. It shows the forum posts and the signature works.

I got the unsubscribe from a thread to work by making a minor change to cb.fireboard.php file for the plugin.

The unsubscribe option was creating this url:
func=userprofile&do=unsubscribe&thread=X

When it should have been this:
func=userprofile&do=unsubscribeitem&thread=X

I currently could not get the unsubscribe all to work, so I just ended up commenting it out until I do.

Does anyone know what stats are supposed to be displayed in the forums tab?

Hi there.

The CB Team is currently modifying its core simpleboard/joomlaboard plugin to properly also support fireboard. This is one of the issues that has already been addressed and currently in development.

That's great to hear nant!

so where is the plugin (cb.fireboardplugin) or what can we do to make it work on:

From your previous posts it sounds like you got everything to work except the Unsubscribe All. I actually used one of your previous suggestions to fix the Unsubscribe to particular threads.

What other problems are you having? I'm using the same specs you mentioned.

His config is a little different but most of the same applies. In step 4 though change this:

Components->Fireboard->Plugin Management->Install New Plugin

Components->Fireboard->Plugin Management-> CB Fireboard Plugin : Publish

Components->Fireboard->Tab Management->Forum : Publish (NB: make sure you publish the Fireboard one, not the SimpleBoard one!)

to

Components->CB->Plugin Management->Install New Plugin

Components->CB->Plugin Management-> CB Fireboard Plugin : Publish

Components->CB->Tab Management->Forum : Publish (NB: make sure you publish the Fireboard one, not the SimpleBoard one!)

Re:CB plug-in for Fireboard 1.0.0

Posted by xfactor - 2007/10/13 03:27

I have no experience with the French but I have seen issues with both the cb default language file as well as the FB english.php.

First try going into this file which has deprecated references to Joomlaboard and possibly Simpleboard:

/components/com_comprofiler/plugin/language/default_language/default_language.php

Change all references to: `_JB_` or `_SB_` to:
`_FB_`

Hum... nothing change but I noticed something.

On my Profile, I can see one of my post I don't see them all but I see this one
(I check the option Show Everything... and this part is correct in the DB so this is not where the bug is coming from)

But I noticed that this particular message was post on my first level of the forum.. instead of all the others msg wich they are in sub forum...

Any Ideas ?

Yes this is a problem with the fb_sessions table.

The plugin tries to filter out and only show forum posts that the actual viewer is allowed to see. It tries to do this by using the contents if the fb_sessions table which appear to be faulty and unstable.

wazowski wrote:

I don't know -

I have been trying to contact the FB developer (sent him PM messages on this site) but have not succeeded yet. Really need to figure out how this table is updated.

The logic is not to display forums posts that the viewer would be unable to see.
So if I am viewing someone elses profile, the forum tab should not display forum posts that this profile owner made in private forums (unless of course I am also allowed to view/post in the same private forum).

Anyone got this working with CB 1.1 and Fireboard 1.0.4?

When I test it I get "This user has no forum posts" in the forum tab, Total Posts in profile page are correct though.

Any pointers?

/DMA

Seems to be working when posting in parent category only, not in child boards.

Doesn't work in 1.0.4. with abo+favorites :(

The link (with joomla sef):

component?option,com_comprofiler/task,userProfile/Itemid,26/tab,getforumtab/&fbunfavthread=1

component?option,com_comprofiler/task,userProfile/Itemid,26/tab,getforumtab/&fbunsubthread=1

I tried uploading and installing the plugin and all it says is:

Unrecoverable error "PCLZIP_ERR_BAD_FORMAT (-10)"

Upload showPlugins - Failed
Installation file not found:

first of all i cant not install plugin.

i m using fireboard 1.0.14 and joomla 1.0.14 and cb 1.1

on cb profiles i have forum settings but when the user click favorites it goes to fireboard profile instead of cb profile.

Do i need to install plugin? (but i cant zip dont work)

Doing what? Did you try and contact the person that supplied it in the first place? It is NOT a BOJ provided/supported plugin.

now i install that but

now i have forum tab on my cb profiles.its nice :)

when i click favorite on Forum any post it says its added but in seconds its redirect me to my fireboard profile.how can i fix this

Unfortunately, that code is hard-coded into Fireboard. I would submit a bug tracker for it, as it is quite annoying and confusing for members so suddenly see "another" profile additional to CB.

I manually hacked the files in plugin/myprofile and took out almost everything - the FB profile page is now nearly blank, containing just a link to the CB profile.

All,

This maybe a general Joomla question... but since it is related to this I thought I would ask

I am trying to edit the default language file and FTP back to my server and I am getting a permission denied response. I have this on two different servers and two different hosts and get the same error..

What am I doing wrong? I have the site off line (thought this maybe the problem)

I am scratching my head, knowing this must be something so simple I am overlooking it :silly:

Thanks

Chris

Looks Like I found the problem... it is a file ownership issue with how the server assigns stuff

Had to rename and update via xplorer

I have done as you said but when I try and place the code in, it gives me an error on mt frontend.

What am I doing wrong?

So what is the general consensus of this plug-in?

Is it better to use this one:

http://www.bestofjoomla.com/component/option,com_extensions/page,show_extension/adid,27/catid,5/Itemid,67/

(which has very hard to understand install instructions...can anyone clarify?)

Or this one: http://www.pixelwonders.de/index.php?option=com_remository&Itemid=204&func=fileinfo&id=3081
