## [Solved] No posts in the upgraded forum!!

Posted by Dade - 2007/09/06 20:56

---

Hi guys,  
I've recently upgraded FireBoard to 1.0.3, but when I look to the forum :S there are no posts in there!!!!!!  
PhpMyAdmin already shows the messages, soo where I've to click at to make the posts return back?

Thx a lot for the support,  
Dade

I'm having the same problem, this error is also showing up:

Invalid argument supplied for foreach() in  
/home/lineupma/public\_html/sfl/components/com\_fireboard/template/default/fb\_pathway.php on line 139

---

Hope someone can help us.

I've looked a little more around and the posts are there, they appear in the DB, and... there's the funny thing... if you go in the section (by the frontend) they are there.  
The problem is just, no one can see if there already are any post in the forum =\_ =

Let's pray the God of all Fireboarders for a fix, :side:  
Dade

I hope The Mighty God of all FireBoarders bless you!!!

Thanks!!!

foreach() errors mean part of your database did not get upgraded properly. Look for thread titles with the titles SQL in them for solution.
