
Forum Not Showing

Posted by RUFiO - 2007/09/01 03:30

I completed a clean install as outlined in the sticky thread here and imported my info back into the new Fireboard. The only problem is that the Categories show but the forums underneath aren't showing on the forum even though they are listed and published in the Fireboard Configuration.

You can see my problem here

EDIT: This is the error I'm getting.

Warning: Invalid argument supplied for foreach() in /home/letsqobe/public_html/ebooksupastore/Aftermath/components/com_fireboard/template/default/fb_pathway.php on line 139

Seems to be a problem with

foreach (\$users as \$user)

EDIT: I've reverted back to the previous fireboard.

I have the same problem, I followed the upgrade directions, but now, the categories are listed, but none of my forums in the front end. In the back end they are listed though... and my posts are in recent posts...

I also get this error

Warning: Invalid argument supplied for foreach() in /components/com_fireboard/template/default/fb_pathway.php on line 139

foreach() errors mean updates did not occur in the database properly. check for missing structure.

Also, This is a test release, you should be using 1.0.3 now.

Re:Forum Not Showing

bugger, I guess I DID post to the wrong message, actually, I am using 1.0.3... please remove these threads of mine, I will continue this in the 1.0.3 forum - since I forgave the test installation of the upgrade - my forum is now screwed up - so I was a bit panicking and posting to the first post I saw who had the same problem as me.... forgive my noob-ness, I'll calm down next time... ps - I still can't see the forums under the categories in my 1.0.3 installation in the front end
