
Things To Consider Before Upgrading

Posted by palebluedot - 2007/09/07 21:58

As everyone knows, 1.0.3 is just around the corner. Here are some suggestions before you get ready to take the dive.

Backup your system. All of it. (You're doing that on a regular basis anyway, right? ;))

Notify your members of possible downtime. You never know what problems to expect.

Setup a local sever for testing such as JSAS (<http://jsas.joomlasolutions.com/>) or a LAMP install ([http://en.wikipedia.org/wiki/LAMP_\(software_bundle\)](http://en.wikipedia.org/wiki/LAMP_(software_bundle))) Install configure it with your current site and database. Then you can do a dry test run without running the risk of messing up your live site.

Did I mention backup? :D

Using a custom template? It may need to be updated before it will display properly. If you are depending on someone else updating your existing template it is a good idea to wait until that update can be performed.

UPDATE: I created a flash demo to show you how to install JSAS on Windows.

DOWNLOAD HERE: Demo.zip

RapidShare Mirror: Demo.zip

Unzip and open JSAS_demo.htm in your web browser. (Flash required to view)

JSAS Support Page: <http://joomlancode.org/gf/project/jsas/forum/>

JSAS Home Page: <http://jsas.joomlasolutions.com/>
