
Out of memory line: 57 error in Internet Explorer

Posted by bunglehaze - 2007/09/09 01:08

Hi folks,

I have been notified by my members that the following error is popping up *in internet explorer only*

Out of memory at line: 57

I have tested the site in firefox and also IE and it is indeed an issue with IE,

This was not happening with the previous build (1.01 build 1) so it has to be a byproduct of a file of bit of code in 1.03. I read that it has something to do with javascript string manipulation that eats up the memory - not sure what mileage I would put on this one..

Any of you know a fix for this or perhaps a way to try and source the issue?

cheers

leigh :D
