## mootools bug ETA of update?

Posted by dannykilla - 2007/09/09 21:40

---

Hi,

As you may guess I use Rockettheme for my Joomla templates and FB and ROK aren't fully compatible due to mootools. I have tried to implement the fix on this post : -

[http://www.bestofjoomla.com/component/option,com\\_fireboard/Itemid,38/func,view/id,18786/catid,66/](http://www.bestofjoomla.com/component/option,com_fireboard/Itemid,38/func,view/id,18786/catid,66/)

But I can't seem to get it to work, any help would be awesome!!!!

So I was wondering if we could have any info on this bug and when will we see a fix for this?

thanks  
Danny

\*PM me if you can help me apply the fix on the link above ;)

I am also facing this problem on my live site.  
Right now, just ignoring it, but getting PMs from users.....

Well, this file may help you. Locate your existing Mootools file in your RT/Yoo Theme template and rename it to xxxxxxxx2.js or whatever name it may have. Once you have done this, rename the file that is attached to this post as the name of the original mootools js file. Then simply upload it via FTP.

This may/may not work. If it works, great let me and the community know. If not, sorry just delete the newly installed file and replace it with your original. Remember to rename it though..

Thanks,  
James <http://www.bestofjoomla.com/images/fbfiles/files/mootools.zip>

sweet, thanks for the effort. so what do i replace? To clarify my probelem, when integrating with fb, it shuts down all the cool mootools menus and other yootools functionality. The menus become static and the css is off and looks tacky?

thanks for the help, i'm knew to joomla cms, Do I just rename that as the mootools.js in the yootheme file?

---

no no,  
keep the original mootools.js.

change the jquery.js from my site/link that I have given.

---

it here -  
/components/com\_fireboard/template/default/js/jquery-latest.pack.js

change it with this one -  
[http://gigahertz.byethost18.com/components/com\\_fireboard/template/default/js/jquery-latest.pack.js](http://gigahertz.byethost18.com/components/com_fireboard/template/default/js/jquery-latest.pack.js)

happy to help a friend in trouble.

everything working ??  
give the site-link :)

OT:

The problem you are facing, is related to Linux/Unix+User permission+Apache-PHP.

Hope you know Linux/Unix's permission system.

When we upload/download files using CPANEL/FTP, the file's owner is you.

But when we use some other PHP based tools like - Joomla Installer (whatever it is -component, module, bots, even pictures via media) the created files owner is not you, its 'apache', yes 'apache' is also a user in the group 'system'.

As the owner is different, you just can't delete other owner's files. Linux/Unix's permission system.

SOLUTION: talk to your web-hoster.

I have the same problem... can someone help me?

I am using a youjoomla template and their support told me that jquery-latest.pack.js is interfering with mootols.

I have a javascript error in my forum as you can see:

<http://www.cinefans.org/index.php/Forum/>

Can someone help me please? :)
