## SOLVED-Latest Posts in Child Forums not shown

Posted by birdie60 - 2007/09/10 10:18

---

If you press "Latest Posts" in the main view of Fireboard 1.0.3, latest posts in Child Forums are not shown.

jep, thats really bad!

is it a bug, or is it wanted?

any progress on this bug?!?

could really use a fix for this so my users don't miss many posts....

---

---

Has this been resolved? I'm using 1.0.4 and Joomla 1.0.13 and I have this problem.

The fix by racoon in this thread does not work for the child boards.

---

## Re:Latest Posts in Child Forums not shown

Posted by gbruner - 2008/01/22 01:40

---

I have some additional information for anyone troubleshooting this problem. If you click into the Parent Forum, you can run Show Latest Posts and new ones in the child boards will show up even though they do not from the top forum URL.

---

In both 1.0.3 and now in 1.0.4 I can't get the Latest Posts to show correctly when logged in. When logged out, it's fine. When logged in, I only get a small fraction of the actual new posts showing. The more I look, I think it may be the posts from Child Forums that are the ones not showing. Is there still no fix for this?

---

## Re:Latest Posts in Child Forums not shown

Posted by gbruner - 2008/01/22 22:23

---

It is documented in the bug list and, unfortunately, was one of the bugs not fixed in 1.0.4.

---

There is a fix available though although I believe FXstein is still testing the performance penalty that comes with it.

I'll post the link in a minute.

It requires a small "hack" in post.php which is described in this post:

[http://www.bestofjoomla.com/component/option,com\\_fireboard/Itemid,38/func,view/id,21199/catid,76/limit,10/limitstart,90/#24828](http://www.bestofjoomla.com/component/option,com_fireboard/Itemid,38/func,view/id,21199/catid,76/limit,10/limitstart,90/#24828)

Make sure you only edit post.php though fireboard.php is already corrected.

Edit: Actually nevermind I should learn to read. I'll have a look at this bug tomorrow.

---

If you look into the #\_\_fb\_sessions table you will notice that only the main categories are listed in there not the child forums or their category numbers. I added one of the childform categories numbers by hand and it was working.

---

## Re:Latest Posts in Child Forums not shown

Posted by gbruner - 2008/01/23 00:32

---

I have 28 child boards on the site right now. There is a distinct possibility that I'll have to add more as the forum traffic picks up. Is there an easier way than editing the session table to enter each separate child board by hand?

=====

---

I don't see what to edit in the database. Please give more details.

=====

**Re:Latest Posts in Child Forums not shown**

Posted by dsmink - 2008/01/23 00:43

---

Its not a solution, cause when the session resets everything is gone again. The problem is that the session only stores allowed boards for the current level.

If you go one level deeper you will see that the child board get added to the allowed\_forums and the mainlevel boards dissappear. hence you only see the childboard latest posts when you use the func=latest in a childboard.

Sorry if my description isn't very clear.

Edit: Try go on your board as guest you will see latest post from childboards then. (if they are public)

---

So, there is nothing we can actually do at this point? Just keep waiting? Looks like we're gonna have to dig into this and find a fix ourself.

=====

**Re:Latest Posts in Child Forums not shown**

Posted by gbruner - 2008/01/23 00:51

---

It might be very clear. But, it is over my head and skill level. I can't afford to go mucking around in the database, especially if it is not a real fix. And, I don't know enough about php to write a hack.

I'm willing to live with the problem right now. It does cause my members to miss follow-up posts. I sometimes have to email them to read the forum. Fortunately (or unfortunately, depending on your perspective :S), I don't have many members yet.

---

A real fix would be good. The 'fix' that racoon posted didn't help.

---

try to delete the following part

```
AND sc.pub_access(lower than)=$group_id
```

for (lower than) use the right charakter ;)

---

Fix add in listcat.php on line 214

```
$database->setQuery("SELECT id, name, numTopics, numPosts from #__fb_categories WHERE parent='$singlerow-  
>id' AND published =1 "Ã«Ã»);  
    $forumparents = $database->loadObjectList();  
    if (count($forumparents) > 0)  
        {foreach ($forumparents as $forumparent){  
            $allowed_forums = $allowed_forums . ',' . $forumparent->id;  
        }  
    }
```

Will post file tomorrow.

Posted by dsmink - 2008/01/23 11:06

---

Is there already a bugtracker for this bug cause I couldn't find one?

If not I've added the bug:

[http://joomlancode.org/gf/project/fireboard/tracker/?action=TrackerItemEdit&tracker\\_item\\_id=9376](http://joomlancode.org/gf/project/fireboard/tracker/?action=TrackerItemEdit&tracker_item_id=9376)

You can download listcat.php here:

<http://joomlancode.org/gf/download/trackeritem/9376/21121/listcat.php>

## Re:Latest Posts in Child Forums not shown

Posted by furryferret - 2008/07/01 10:29

---

Fix add in listcat.php on line 214

Code:

```
$database->setQuery("SELECT id, name, numTopics, numPosts from #__fb_categories WHERE parent='$singlerow-  
>id' AND published =1 "«»);  
    $forumparents = $database->loadObjectList();  
    if (count($forumparents) > 0)  
        {foreach ($forumparents as $forumparent){  
            $allowed_forums = $allowed_forums . ' . ' . $forumparent->id;  
        }  
    }
```

The above is not working for me.. I can't see the latest posts at all...I have tried to adjust server time etc.. but for one thing this code is not on line 214, it on line 239.. maybe that is because I have the latest version, however for me to put this on a live site, I need to get the latest post feature to work.. can someone assist me??

Thanks

Edited on 07/15 to reflect that I got it working, but I can't for the life of me remember exactly what solution on this thread did it...LOL... so sorry!
