
How can i \"re-import\" messages from JB

Posted by hauto - 2007/09/10 10:59

Hi, i was testing FB for a while to look for bugs,... I imported the messages from JB. Now my tests are finished and I would like to "re-import" the current messages from the JB, so that I can change to JB.

Know anyone a simple way to do that?

Thx
Tom

After a fresh installation of Fireboard with Joomlaboard present you should have an option to "upgrade". That should handle everything.

Yes i know, but i don't like to uninstall fb because i don't like to loose my configuration, emotions and other changes.

is there no easy way to delete some entries from the database, so that the upgrade-button is available again?

I don't think so. All old tables need to be dropped. You will have to back up everything you want to keep and restore it after the install. It isn't that hard. What you want to do sounds harder.
