
Old URLs for Images/Files invalid, due to Upgrade

Posted by dvbshop - 2007/09/11 11:46

Hi,

as the folders have changed, old postings containing uploaded images and files are no longer valid.

http://www.xxx.xx/components/com_fireboard/uploaded/files/KabelDeutschland.zip

was the former URL to the files/images, uploaded in older postings PRIOR to update to 1.0.3

Now the new URL is

<http://www.xxx.xx/images/fbfiles/files>

How can I change, maybe with UPDATE SQL-function, the FB_MESSAGES_TEXT - URL with the older wrong URL's ?

=====

Or you can make a folder/s for the old files to mimic the old file structure and move the corresponding files into it.

aaaahhhh

ok, got you ... Will copy it back, because I moved all the old stuff to the new one ...
(because in installguide avatars etc. had to be moved to new location, that's why I thought "everything" has to be moved)
- my fault ...

Thanks!
