
Group badges tutorial

Posted by bennieblanco - 2007/09/14 23:42

Ok here it is . Small but effective hack that will help you show group badges. It does not matter if you have 1 or 100000 users. No DB hacking

<http://www.youjoomla.com/joomla-fireboard-groups-badge-hack.html>

Does it work with FB 1.0.3 too?

I put the hack into the code but it seems in the Admins Backend I can't sign the users to any of these groups

=====

Re:Group badges tutorial

Posted by bennieblanco - 2007/09/22 01:42

it is for FB 1.03 I am sure it works on all versions. I posted in 1.03 forums , didn't I? :)

=====

Re:Group badges tutorial

Posted by bennieblanco - 2007/09/22 01:43

@FredM you do not have to assign the users , they are assigned by Joomla

=====

Re:Group badges tutorial

Posted by FredM - 2007/09/22 01:44

True....

Just trying to find where in the Admin/ FB settings I can sign users to the group. The admin panel on <http://www.youjoomla.com/joomla-fireboard-groups-badge-hack.html> does look different to me.

I do not get it anyhow... do I not tell joomla/ FB somewhere what user is in what group and using what badge?

In the joomla user profile it seems I can not sign users to any group

I use CB 1.1 too

=====

Re:Group badges tutorial

Posted by FredM - 2007/09/22 01:51

Uhhh.. done by the ID?...

=====

Re:Group badges tutorial

Posted by bennieblanco - 2007/09/22 01:52

yes joomla ID

=====

Re:Group badges tutorial

Posted by FredM - 2007/09/22 01:56

Woot. This makes it a real hack :laugh:

Thats cew!! Thanks alot, now I understand

=====

Re:Group badges tutorial

Posted by bennieblanco - 2007/09/22 01:59

there you go ! :) so no need to assign groups since we already have them in Joomla. I have JAACL and it still works. The hack is not pulling anything from FB this is why it works anywhere , and it would work on any forums that is integrated in joomla. I guess I should rename it to " ULTIMATE BADGE HACK"

=====

Re:Group badges tutorial

Posted by webssolutions - 2007/12/25 13:52

Hi...im sorry but i dont understand that tutorial...
how can i show my badge at my site?

=====

Re:Group badges tutorial

Posted by grumblemarc - 2007/12/25 18:02

I would say follow the tutorial. But since you don't understand it that doesn't help. What part do you not understand? It pretty simple and straightforward.

Re:Group badges tutorial

Posted by iosoft - 2008/01/07 21:11

Can you please upgrade this hack with a Backend ADMIN console with Fireboard's other configurations, like- Fireboard Configuration, Forum Administration, User Administration.... Rank Management

Also, is it possible to make some auto generated badge system ?

I mean, say - a registered user has been upgraded to Author, then he will automatically gain the "Writer Badge". ?

I am eagerly waiting for the upgrades B)

=====

Re:Group badges tutorial

Posted by bennieblanco - 2008/01/07 22:03

I am not on the dev team , and this hack would work with any joomla component that uses uids , I would not be able to create the actual setting for this in backend, as for your second question the answer is yes, however you upgrade your users the badge will change automatically

=====

Re:Group badges tutorial

Posted by iosoft - 2008/01/08 07:37

Thanks for your reply.

You have done a great job but without back-end only 1% user will actually use it.

My Suggestion is - take your time, but do make a back-end :)

Re:Group badges tutorial

Posted by nanaya - 2008/01/08 13:01

Question in "NOTE: replace image names with your images"

What is gazda.gif? That name "Gazda" What does that stand for in ranking wise. and "Club" means members right?

=====

Re:Group badges tutorial

Posted by bennieblanco - 2008/01/08 20:57

sorry about that , "gazda" means boss, :) that would be Admin

=====

Re:Group badges tutorial

Posted by randellid - 2008/04/08 13:57

I woUld like to use this also.

Forgive me for sounding a bit stupid. But how do I assign people to groups? Do I need to install a groups component?

Thank you.:S

=====

Re:Group badges tutorial

Posted by bennieblanco - 2008/04/08 15:25

no you don't assign users, they are automatically assigned , you are actually assigning badges to existing Joomla groups, like Administrator , registered moderator and so on

=====

Re:Group badges tutorial

Posted by iosoft - 2008/04/08 18:54

do I need any other components (specially custom group creator / groupJives etc) other than Joomla and Fireboard ?

=====

Re:Group badges tutorial

Posted by bennieblanco - 2008/04/08 18:57

nothing else , just follow the tutorial

=====

Re:Group badges tutorial

Posted by randellid - 2008/04/08 21:16

Thank you, that cleared it for me.

Re:Group badges tutorial

Posted by deslim80 - 2008/05/07 07:55

Hi there,

I followed the tutorial and nothing shows.

I am using fireboard 1.0.4

2 questions i have to ask:

1. In the tutorial you assigned

Is \$ugid == 18 the default joomla group ID?

2. Is this code compatible with fireboard 1.0.4?

Any help appreciated.

Cheers,

Re:Group badges tutorial

Posted by iosoft - 2008/05/18 20:02

I am going to implement it for my site but before that have some questions :P

1.
What Table is this ?

<http://www.youjoomla.com/images/stories/usergroups.JPG>

2.
I want to some GROUP BADGE and some Individual BADGE.

Example of GROUP BADGE -

1. any user with Author power.
2. any user with Publisher power.
3. Forum MODs.
4. Premium Member (same as registered user but with this 'badge' ;)

Example of Individual BADGE -

1. Admin (UID:63 and UID:108)
2. DEALER (5 Users)
3. one Super-Global MOD.
4. one Community Helper.

Can you please help me how to implement this....

Re:Group badges tutorial

Posted by tevez - 2008/05/24 00:05

how can i know the joomla ID for Admin, Moderator and etc ?

Re:Group badges tutorial

Posted by bionic - 2008/05/30 15:59

its compatible with fireboard 1.0.4 :)

Re:Group badges tutorial

Posted by nkt - 2008/09/16 16:31

Got an issue for all (even if using jacl or other hack component).

this is not perfect but work!

1. go to you administration here : administrator/index2.php?option=com_users (user manager),
2. then click on view source on your navigator (firefox and explorer) and search group_type
3. it's done you now have the list of all the groups and the id associated (the option value).

Re:Group badges tutorial

Posted by stefanrenne2 - 2008/10/06 19:55

Nice I made a edit, its not rilly hard but o well, I made it (tested in default_ex on 1.0.5 rc1)

check my screenshot

<http://download.mijnwebdesigner.com/fireboard.jpg>

this is what I did

in message.php

beneath

add

Don't forget to change the user type numbers and locations of the gif files
the last part is to gif a mod a mod picture and the 1st part is just the normal
then go to
view.php and find

```
        if ($ulsMod and !$showSpRank)
        {
            $rText = _RANK_MODERATOR;
            $rImg = JB_URLRANKSPATH . 'rankmod.gif';
        }
    if ($ulsAdm and !$showSpRank)
    {
        $rText = _RANK_ADMINISTRATOR;
        $rImg = JB_URLRANKSPATH . 'rankadmin.gif';
    }
}
```

and change it to (or just remove it)

```
        /*if ($ulsMod and !$showSpRank)
        {
            $rText = _RANK_MODERATOR;
            $rImg = JB_URLRANKSPATH . 'rankmod.gif';
        }
    if ($ulsAdm and !$showSpRank)
    {
        $rText = _RANK_ADMINISTRATOR;
        $rImg = JB_URLRANKSPATH . 'rankadmin.gif';
    }
    */
```

This will gif the admin and mod not auto an mod / admin image
the mods and admins that you now have will still have that image but that can easy be changed in the firaboard admin
:laugh:

Re:Group badges tutorial

Posted by Jing - 2008/10/19 14:24

I tried this but got html code errors instead... :(
I don't understand where I went wrong...
Can I send my html files to someone and change them for me? Im not really good with html coding. :(

I wish they will include this feature in the next FB version.

Posted by stefanrenne2 - 2008/10/20 16:14

mmm wel it's not rilly hard

just post your message.php here and ill edit it for u

in the mean time, can some1 help me out

im trying to make a remake that if user id = x that it then shows a image

don't know what I did wrong can some1 help me out

```
$user =& JFactory::getUser();  
$uid = $user->get('id');  
if ($uid==62){  
echo "  
}
```

=====
