
Fireboard Theme for WordPress Blogs - sorry...!

Posted by comprido - 2007/09/15 23:47

Hi!

My name is Pedro (Formado Comprido from Capoeiras.Com).

I´ve re-created the nice theme at www.bestofjoomla.com home -inspired in Dorona-Brown fireboard template- in order to work lika wordpress blog theme.

Look at: www.fcsites.com :P

The theme is downloadable from the "descargas" section. It comes with some extras as the header-sidebar login panel (admin link included), pages and categories linked in header, some pictures prepared to work from .images folder... and a direct link to the site RSS.

As I´ve done with the padexx.de home = famouspadexx SMF Theme, i just want to enjoy my little CSS and design experience in the GNU aplications world.

So... sorry about any inconvenience and enjoy the theme.
