## Forum on full page! Atlast heres how u can!

Posted by musa - 2007/09/18 16:55

---

Just do this:

- 1.Copy ur current template through site ftp in templates, and rename it to forum
- 2.remove all the body tags calling for the modules
- 3.keep the load body tag there
- 4.save it and assign it to the forum only

--

5.goto its css(site templates)

6.there u will find for body:

float = right

change it to

float = center

7.voila!

done!

:)

pm me if theres any confusion!

I have attached the template edited with this post!

[http://www.bestofjoomla.com/images/fbfiles/files/js\\_empire\\_forum.zip](http://www.bestofjoomla.com/images/fbfiles/files/js_empire_forum.zip)

have fun!

my site:

<http://www.musa.co.nr>

and if u liked it! then do not hesitate to donate a dollar on my site!

regards!

I don't really have need for this tip but for people that might, may need a little more detail could you explain if you are talking about the Joomla template or Fireboard template.

Also could you go into more detail concerning steps 2 & 3 "2.remove all the body tags calling for the modules 3.keep the load body tag there"? those instructions are really vague for someone totally unfamiliar with Joomla/Fireboard tempates. Where is this removal to take place?

And finally, will this work on any template? JS Empire is a nice template but rather limited and not as robust as some.

for those who r having prob understanding,  
just upload this template, in joomla templates  
and assign it as default for forum

musa wrote:

for those who r having prob understanding,

me as well :P

---

and assign it as default for forum

... but don't forget to assign your running joomla template to any other menu item else unassigned menu items will use the default template which is almost empty!

Btw. There is another basic template available in the joomla template library called 'basic' made available by <http://puntaltenses.com.ar>.

This solution works for me:

=====
