## How To Manage Category Images

Posted by FidelGonzales - 2007/04/18 23:12

---

I am playing around with an install and noticed that there are a few things done here that I have yet to figure out how to do. One of these operations is Category Images. How do I designate category images for each individual category?

\*bump\*

I was about to post this question myself.

I can't find any way to set a category image. :sick:

Hi FidelGonzales,

Category images folder is "components/com\_fireboard/category\_images" or you can change on admin.

category images working with category id :

catid\_notlogin.gif

catid\_on.gif

catid\_off.gif

for example :

your category id is "3" create

3\_notlogin.gif

3\_on.gif

3\_off.gif

than upload your images on your category images folder. default config folder is :  
"components/com\_fireboard/category\_images"

Try it.

Excellent. Thanks.

Making these linkable with alt info toward the category and toward an external link as in a category sponsor would be good.

Category images folder is "components/com\_fireboard/category\_images" or you can change on admin.

what do u mean on admin i cant find anything on the category section on the fireboard admin page where u can change the images for seperate boards?

thanks

Danny

Cool. Thanks. I'm not yet using Fireboard, but, is there any chance of making these linkable so that the image, alt text and logo could be used for advertisers?

This looks like the answer to my other question. I have tried creating images with the number of the category, no luck. I have even tried renaming the default images to see if something was wrong with my images. Is there a setting to make fireboard use these category images or something I might be missing?
