sorry i cannot understand!  
why you have a problem Cyrillic in signature, no in body message and i have problem in body message not in signature?  
do you use fb 1.03?

somebody can help me to solve this problem?  
thank you

my db is encoded like this anyway i don't know weather it matters.

the matter is the all the cyrillic in FB works fine except in the signature as it could be seen on my link or the image i've applied

ok solved all with this in global.php  
header("Content-Type: text/html; charset=UTF-8");

i have right latin , italian and russian charset ... in body and signature ...  
but only with new insert ..

in your case ok, but it mine it does not work. if i change the charset to UTF-8 my website looks like this  
<http://www.bestofjoomla.com/images/fbfiles/images/untitled-6f89e56c40baf6c04f82933718b8f364.JPG>

i repeat, the cyrillic does not work only in the signature

what is more, when the signature is set through CB, the cyrillic displays fine, but through FB it does not display properly

as you can see, the cyrillic in the signature doesn't work here, neither in the signature, nor in the field...  
i've tried to write something in cyrillic -> "?@>10 40;8 @01>B8 :8@8;8F0B0"
