
Posting New Message missing

Posted by adsperclick - 2007/09/14 06:04

Hi guys,

I installed fireboard but something is missing there is no capability to post new topic. What should I installed or add to my Fireboard.

Newbie here need help.

Thanks

I have the same problem of not being able to post any message due to no link or button available. Installed the Fireboard component and set it up pretty much as default. Created and added the fireboard category forums. Went through the fireboard configuration setup line by line. Unlocked the forum etc. etc. can not find any link or button for posting messages, either as admin or even creating a registered alias. Never had this problem using phpBB or any other forum script. Any help would be greatly appreciated. Thanks

Please create a sub forum or sub-category.

Trying to create a forum under the parent category results in the entire category dissapearing from the forum altogether. I must be missing something here. It's not obvious what ever it is.

Thanks for your help...I'm stumped.
