## Change the Font Color

Posted by PMS Shortcake - 2007/09/29 04:03

---

I tried to change the font color in css but it says at the bottom that the css has to be in write mode to save changes. How do I get the css to be in write mode? No one can read the side text cuz its white on a white bg. Thank you!!!

Bonny

The permissions to the file/folder must be set to 777 on your server for them to be writable.
