
Badwords Hiccup

Posted by airgasm - 2007/05/18 04:45

Posted elsewhere on this site but no response!

Sorry, I did not see this child board:S

Hi, I have downloaded the latest files for Badwords2 from http://www.schoolastech.com/index.php?option=com_remository&Itemid=29&func=select&id=3. After installation of the latest FireBoard build, I have found it was necessary to edit the edit the file

components/com_fireboard/template/default/view.php on line 31.
I changed
"require_once ('components/com_badword/class.badword.php');" to
" require_once ('components/com_badwords2/class.badwords2.php);".

That stopped the program tripping up however, when I set the badword option to yes, all posts now have * This message has been censored because it contained one or more words set by the administrator *. The problem here is it is regarding all the text is bad and the only badwords set are:

badword*,
badword2,
test

which I am using for testing. I would appreciate some assistance here please, thankyou.

Barry Ferguson

Hi Barry,
I've just tried this and got the same message - on all posts. Complete waste of time and have now uninstalled it. Considering the lack of posts in this forum and at Schooltechs, I assume everyone else isn't bothering with this and just editing out badwords when they arise. I'll do the same.

Hi Roly, This was a second post I made not realizing there was a child forum here at the time. Pop over to [This link on](#)

the Fireboard 1.0 topic for the answer. I am not sure if this is working with the 1.0.1 beta version yet, I have been a bit busy.

Regards Barry

i'm having a problem, i corrected too in 'components/com_badwords2/class.badwords2.php', but now it says "Invalid message required" (È stato richiesto un codice messaggio invalido.) instead of showing filtered one. something i could do? I need the filtering.. thanks

this is the url it opens

"http://www.corrieredelleliberta.com/joomla1/index.php?option=com_fireboard&func=view&id=2&catid=3#2"
