
New! Doesn't work very well....

Posted by adamx8 - 2007/10/03 05:33

I installed Fireboard to see if I like it better than SMF, and I really like that sh404sef works with FB. Past that I am unsure how I feel. Besides that I think this forum has a ton of potential.

I have 1.0.3 installed and I converted my SMF db over...it worked fine except the attachments. However the threads won't show new if someone posts in a section that was transferred over from SMF. If its in the new sections I made after the conversion it will show. What can I do to solve this? Any help is appreciated....

Adam

Is there some way for me to reset this to get the green folders and "newest posts" to work on all the sections?
