
Problems converting PHPBB to FB, poss. work around

Posted by Sorsha - 2007/10/04 17:45

Hi there.

I'm having some trouble transferring my PHPBB to FB on J!1.5. Basically what I was hoping to do was transfer phpbb to another forum base, and then transfer that to FB. Anyone have any recommendations to which forum I could convert to?

Any advice would be very helpful, as I'm a complete newbie to Joomla and FB. Obviously, I don't want to lose any of the posts that I've already got on my PHPBB, and I've taken down my phpbb to do this conversion.

Thanks in advance,
Sorsha

Edit: Or could I copy the phpBB tables to the FB tables manually in myphpadmin? I'm not especially sure how to do that, since I don't know which tables to swap them to.
