## Badword problem

Posted by bobhardyoyo - 2007/10/10 15:18

---

Hi

I installed the badword component, turned it on in fireboard, went to the forum and tried to view a post and it had lost all its formatting and just displayed a white page with a few headings and no text from the post (see the attached file), when the bad words is turned off in the fireboard config everything goes back to normal. Any ideas what could cause this? Forgot to mention I'm using badword2.

Thanks
