
Notice: Constant _FB_AVATAR_GDIMAGE_NOT

Posted by PiEII - 2007/10/11 10:20

Hi, guys, i'm new to Joomla & Fireboard. Just installed Fireboard and this sticky notice is starting to annoy me.

Notice: Constant _FB_AVATAR_GDIMAGE_NOT already defined in
E:\Projectz\Joomla\administrator\components\com_fireboard\language\english.php on line 49

I think that it is not fatal, BUT it is annoying.
Suggestions?

Regards, Victor

Hi,
this bug is already known :-) To fix it do the following:

Joomla!/administrator/components/com_fireboard/language/english.php:

Go to line 48+49

Original:

```
DEFINE('_FB_AVATAR_GDIMAGE_NOT','GD Library not found');  
DEFINE('_FB_AVATAR_GDIMAGE_NOT','GD2 Library not found');
```

Fix:

```
DEFINE('_FB_AVATAR_GDIMAGE_NOT','GD Library not found');  
DEFINE('_FB_AVATAR_GD2IMAGE_NOT','GD2 Library not found');
```

That should work!

Regards, Jan.

Well first, congratulations on finding this post! YOu seemed to be having a very hard time of it and I was getting worried.
Second your server has to have the GD/GD2 library installed. If not no fixes to Fireboard will work.
