## Upgrade from 1.0.0 to 1.0.3, 1.0.4 Stable

Posted by BoJosley - 2007/10/11 11:43

---

I have been following the instructions in 'Fireboard Forum\_Installation\_Upgrade\_Manual.pdf' and everything goes fine until you ask me to

If necessary, rename all the "jos\_" occurrences to your own database prefix. Hence, if your db prefix it "boj\_" then you should rename all "jos\_" to "boj\_".

I can see all datatables contain the 'jos\_' prefix from myphpadmin. I have a couple of questions:

- 1) how do I rename them?
- 2) is it all my tables?

I continued without renaming but ended up with a lot of SQL errors when I ran 'Fireboard\_100\_to\_1.0.3.Stable.sql'

Can anyone help my site is down and I am worried.

---

## Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by BoJosley - 2007/10/11 12:06

---

Ok I have found how to rename data tables it was under the operations tab in myphpadmin. I renamed all jos\_fb\* to boj\_\* and tried to run the 'Fireboard\_100\_to\_1.0.3.Stable.sql' - I still get SQL errors this time relating to not being able to read data tables called jos\_fb\*. My site is still down and I am beginning to regret waking this morning.

---

## Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by freefallnz - 2007/10/11 12:35

---

It was not necessary to change your database prefix at all... your site was set up in the most common way (default) using 'jos\_' as the SQL prefix..

Change all your 'bos\_' amendments back to 'jos\_' and all should be fine

---

## Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by BoJosley - 2007/10/11 12:44

---

Thanks for your comments freefallnz I had done it already. Now when I look at my forum from the front end it renders ok but I can only see the main categories of the forum and none of the messages at all. I guess this is because I could not get the 'Fireboard\_100\_to\_1.0.3.Stable.sql' to run. Have you any further suggestions?

---

## Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by freefallnz - 2007/10/12 01:05

---

Interesting,

I've go that same problem..

I have seen in a couple of other post to run the update statistics.

Sadly in my case update statistics just times out.. and like the forum is lucky if its got 40 posts on it.

---

## Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by BoJosley - 2007/10/12 08:37

---

I think that the nub of this problem is that the 'Fireboard\_100\_to\_1.0.3.Stable.sql' has not worked for us. Any suggestions out there?

---

## Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by grumblemarc - 2007/10/12 12:12

---

"Could not get it to run". Are you referring to the errors that you get that "prevent" the SQL from running? Easy way to get around them. Here's an example with the 1.0.1 to 1.0.3 script-others are similar. When you get an error delete the code you have run up to that point and run the SQL again. I would run them in sections-noted by the "alter table" at the beginning or each new query.

EDIT\*

OR you can try this if the following script editing is not our cup of tea.

Example script.

```
--  ^
--(  )-----^(  )
-- ||          SQL Upgrade          ||
-- ||      Fireboard 1.0.0 to 1.0.3 Stable      ||

## Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by BoJosley - 2007/10/12 13:05

---

I have tried again and run the sql in blocks marked by "/\* Alter table" as you suggested. I got quite a few error messages usually associated with not being able to "DROP". When this happened I moved on to the next block and pasted that in. Some blocks ran without errors and some did not. I am not totally sure if you wanted me to delete the offending "Drop" line in the SQL try to re-run it. Is that correct?

Once I had completed the process my fireboard shows but says "There are no forums in this category!" in each category. The good news is that the Recent post show some messages which I can successfully navigate to and read. So it seems I have just lost the connection between categories and forums. Can you help any more?

=====

---

I have just installed the EasySQL joomla component and ran the SQL script here. But I still have the same problem "There are no forums in this category!" in all categories.

I guess its the following code that did not run

```
/* Alter table in Second database */
alter table `jos_fb_categories`
  add column `headerdesc` text NOT NULL after `description`,
  add column `class_sfx` varchar(20) NOT NULL after `headerdesc`,
  add column `id_last_msg` int(10) NOT NULL DEFAULT '0' after `class_sfx`,
  add column `numTopics` mediumint(8) NOT NULL DEFAULT '0' after `id_last_msg`,
  add column `numPosts` mediumint(8) NOT NULL DEFAULT '0' after `numTopics`,
  add column `time_last_msg` int(11) NULL after `numPosts`,
  drop key `catid`,
  drop key `catparent`,
  add KEY `msg_id` (`id_last_msg`),
  add KEY `parent` (`parent`),
  add PRIMARY KEY(`id`),
  add KEY `published_pubaccess_id` (`published`,`pub_access`,`id`), COMMENT="";
/* Create table in Second database */
```

## Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by Valc - 2007/10/15 00:55

---

Hi to all!

The same problem into the same places.

I try in english, i hope than you can understand.

This one is working fine for me:

Backup structure and content of all "jos\_fb\_" tables (maybe we need to restore all)

Backup only content of all "jos\_fb" tables (we work with this one later)

Erase all "jos\_fb" tables from te DB

the attached file in this post, is the same than FB\_databaseStructure file; but, with the "jos\_fb\_".

Run the content of FB\_databaseStructure from the "sql" section in phpmyadmin.

If all is right, now, we have the righth structure from "fireborad 1.0.3"

Take the previous backup of the "only content".

Run the "only content backup" from "sql" section in phpmyadmin.

Errors?

Is normal.. study thats errors, solve that, and try again (for every time than you "try again".. the best if you are not sure about what are you doing is "erase again" the "jos\_fb\_" tables and "begin again" "running FB\_databaseStructure".. and then "try again" with the "Only content backup repared"

Into my "only content backup" i have fount two "SQL errors"

the firts is located into the table "jos\_fb\_categories" (my content backup has the "image field" than no exit into the "Fireboard 1.0.3 structure"..

Ok, erase "image" and him values from my conten backup.

--

```
-- Volcar la base de datos para la tabla `jos_fb_categories`
```

--

```
INSERT INTO `jos_fb_categories` (`id`,`parent`,`name`,`cat_emoticon`,`locked`,`alert_admin`,`moderated`,`moderators`,`pub_access`,`pub_recurse`,`admin_access`,`admin_recurse`,`ordering`,`future2`,`published`,`checked_out`,`checked_out_time`,`review`,`hits`,`description`,`headerdesc`,`class_sfx`,`id_last_msg`,`numTopics`,`numPosts`,`time_last_msg`,`image`) VALUES (1, 0, 'General', 0, 0, 0, 1, NULL, 0, 0, 0, 0, 1, 0, 1, 62, '2007-10-14 03:00:43', 0, 0, 'Espacio de ámbito general abierto para que, los usuarios registrados o no, puedan publicar sus mensajes dentro de la normativa vigente.\n\nLa web dispone también de Foros privados (solo los usuarios registrados pueden publicar).', "", 262, 16, 59, 1189985401, ""),
```

The thing in red color must be erased only from jos\_fb\_categories and for every value you must be sure than erase the last ", ""(important!! only into the jos\_fb\_categories

The second "sql error" is in "jos\_fb\_smileys" because the "FB\_databaseStructure" adds this one before... the solution for me:

Go to the "only content backup" and copy and past to execute the "SQL" from the next to jos\_fb\_smileys.

--

```
-- Volcar la base de datos para la tabla 'jos_fb_subscriptions'
```

--

..the rest of the queries..

---

## Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by PaulyPaul - 2007/10/18 17:36

---

Hello,

I too am having trouble upgrading from 1.0.0. to 1.0.3. Stable.

I have copied across all the files as advised and began making the SQL changes.

Insert the 1.0.0. to 1.0.3 code and get this error:

#1091 - Can't DROP 'catid'; check that column/key exists

Ok. so I remove that line and run again. But I get:

#1091 - Can't DROP 'catparent'; check that column/key exists

So, remove that line too and then get:

#1068 - Multiple primary key defined

Can't see a solution for this error on these boards :( so can anyone help?!?!

---

## Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by grumblemarc - 2007/10/18 17:42

---

Keep going. There shouldn't be errors but there will be. This is "normal".

---

## Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by PaulyPaul - 2007/10/18 17:46

---

Hello, when you say "keep going" do you mean input the next SQL statement after:

```
alter table `jos_fb_categories`
  add column `headerdesc` text NOT NULL after `description`,
  add column `class_sfx` varchar(20) NOT NULL after `headerdesc`,
  add column `id_last_msg` int(10) NOT NULL DEFAULT '0' after `class_sfx`,
  add column `numTopics` mediumint(8) NOT NULL DEFAULT '0' after `id_last_msg`,
  add column `numPosts` mediumint(8) NOT NULL DEFAULT '0' after `numTopics`,
  add column `time_last_msg` int(11) NULL after `numPosts`,
  drop key `catid`,
  drop key `catparent`,
  add KEY `msg_id`(`id_last_msg`),
  add KEY `parent`(`parent`),
  add PRIMARY KEY(`id`),
  add KEY `published_pubaccess_id`(`published`,`pub_access`,`id`), COMMENT=";
```

and ignore the "#1068 - Multiple primary key defined" message?

---

## Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by Jag - 2007/12/14 17:09

---

Hi,

I get an error running:

```
alter table `jos_fb_messages`
  add column `modified_by` int(7) NULL after `moved`,
  add column `modified_time` int(11) NULL after `modified_by`,
  add column `modified_reason` tinytext NULL after `modified_time`,
  add KEY `hold_time` (`hold`,`time`),
  drop key `id`,
  add KEY `locked` (`locked`),
  add KEY `time` (`time`), COMMENT=";
```

I get the following error message:

```
"ERROR 1091 (42000): Can't DROP 'id'; check that column/key exists"
```

I've traced this down to:

```
alter table jos_fb_messages
drop primary key(`id`);
```

Which results in the following error:

```
"ERROR 1075 (42000): Incorrect table definition; there can be only one auto column and it must be defined as a key"
```

Is it safe to ignore the "drop key `id`," line?

This would result in a table definition of:

```
mysql> describe jos_fb_messages;
+-----+-----+-----+-----+-----+-----+
| Field      | Type      | Null | Key | Default | Extra      |
+-----+-----+-----+-----+-----+-----+
| id         | int(11)   | NO   | PRI | NULL    | auto_increment |
| parent    | int(11)   | YES  |     | 0       |             |
| thread    | int(11)   | YES  |     | 0       |             |
| catid     | int(11)   | NO   |     | 0       |             |
| name      | tinytext  | YES  |     | NULL    |             |
| userid    | int(11)   | NO   |     | 0       |             |
| email     | tinytext  | YES  |     | NULL    |             |
| subject   | tinytext  | YES  |     | NULL    |             |
| time      | int(11)   | NO   | MUL | 0       |             |
| ip        | varchar(15) | YES  |     | NULL    |             |
| topic_emoticon | int(11)   | NO   |     | 0       |             |
| locked    | tinyint(4) | NO   | MUL | 0       |             |
| hold      | tinyint(4) | NO   | MUL | 0       |             |
```

ordering	int(11)	YES	0
hits	int(11)	YES	0
moved	tinyint(4)	YES	0
modified_by	int(7)	YES	NULL
modified_time	int(11)	YES	NULL
modified_reason	tinytext	YES	NULL

Fireboard seems to work OK if I ignore this line, but thought I better check that this won't cause me problems later.

If it helps, we're running Joomla 1.0.13 and our forum history is:  
 JoomlaBoard 1.1.3 -> JoomlaBoard 1.1.4 -> Fireboard 1.0 release -> Fireboard 1.0.3 release

Thank you.

---

## Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by grumblemarc - 2007/12/14 17:27

Skip all missing and duplicate errors. I'd hold off on upgrading. The new release is right around the corner. Just don't ask for a specific date 'cause I aint tellin'.

## Solved!!! - Re:Upgrade from 1.0.0 to 1.0.3 Stable

Posted by hafi7000 - 2007/12/28 01:11

Sorry, I found the file in the 1.0.3 Stable download file.  
 here is the link  
[http://joomlaocode.org/gf/download/frsrelease/5447/15386/Fireboard\\_Forum\\_1.0.3\\_UnzipFirst.zip](http://joomlaocode.org/gf/download/frsrelease/5447/15386/Fireboard_Forum_1.0.3_UnzipFirst.zip)  
 Open the zip file and move to the upgrades folder.

i did the mysql update and finally - it WORKS !!!!!!!!!!!!!  
 thanx to all of you.

---

## Re:Solved!!! - Re:Upgrade from 1.0.0 to 1.0.3 Sta

Posted by mediaguru - 2007/12/29 21:19

I FIXED MY foreach problem after much searching, de-installing, re-installing and even getting grief from someone here who said "you don't deserve help". How rude.

Here's what I did.

---

I tried to install from FB 1.0-1.04. The problem was, crucial SQL commands which were in a folder called "upgrades" were not in my zip file which I downloaded. These were mistakenly left out. As a matter of fact, the entire "upgrades" folder was not there. This caused much confusion.

After finding these files in the 1.03 upgrade I executed them in sequence but still had problems.

What worked

I heard someone mention they skipped some lines (with the errors) in the SQL commands. So I started executing the SQL commands and when they'd error out, I'd continue executing them PAST the lines of SQL code which caused the errors. This finally solved the problem.

If this doesn't make sense I can try to explain again to anyone who is having the same problem.

It is all very vague, so now I will have a go at that. Should be a warning in that this component is not suited to non-programmers... It was a lot easier doing the upgrade from the original JoomlaBoard :side:

I agree. And the fact that they "forgot" to put in the SQL commands in the .zip file also caused me all sorts of problems. They should take an example from Joomla or Community Builder on upgrading and the extremely important documentation which should accompany it, rather than telling people like me who had problems since there were missing files that we "don't deserve support."

grumblemarc wrote:  
Skip all missing and duplicate errors.

Hi again,

I've held off my upgrade to see how the 1.0.4 release went.

As per my post on page three of this thread, I get the following when I try and upgrade from 1.0 to 1.0.4:

```
mysql> describe jos_fb_messages;
+-----+-----+-----+-----+-----+
| Field      | Type      | Null | Key | Default | Extra      |
+-----+-----+-----+-----+-----+
| id         | int(11)   | NO   | PRI | NULL    | auto_increment |
(snip)
```

What should this look like on a clean install?

The upgrade instructions say to drop the key, but it is a primary key in my current database, so this drop key syntax would be wrong. I can't do a drop primary key, because the current field is an auto-increment, and an auto-increment field must be a key.

As you can see, this problem is a little different than a missing or duplicate field.

Should I just ignore this error, and leave the field as described above, or should I also remove the auto-increment type, in addition to dropping it as a primary key?

ie:

```
/* Stop being an auto_increment */
alter table `jos_fb_messages`
  modify column `id` int(11) NOT NULL;
```

```
/* Stop being a primary key */
alter table `jos_fb_messages`
  drop PRIMARY KEY ('id');
```

Will removing the auto\_increment cause issues for fireboard?

Thank you for any help.

Cheers,  
Jag

PS: Where can I find the clean install database layout in the 1.0.4 CompletePackage install? It's not in the xml file, and I've not found it in the code so far.

I've figured this out myself, posting here in case someone else finds it useful.

re: my previous post the id field jos\_fb\_messages is fine.

I installed a clean installation of fireboard 1.0.4 on a test system, and compared it to my upgraded tables. I was surprised to see several differences, I'm not sure if this is missing stuff from Fireboard 1.0 -> 1.0.4 upgrade, or if this is hangover stuff from the JoomlaBoard to Fireboard migration.

For each table I've listed the differences I've found, and the SQL to bring the upgraded table in line with the clean install table schema.

Table: jos\_fb\_attachments

clean install table has a default value of '0', upgraded table has no default.

```
ALTER TABLE `jos_fb_attachments` MODIFY `mesid` int(11) NOT NULL default '0';
```

Table: jos\_fb\_categories

Extra field "image" in upgraded table, doesn't exist in clean install  
Default value for moderated is "0", it is "1" on a clean install.

```
ALTER TABLE `jos_fb_categories` MODIFY `moderated` tinyint(4) NOT NULL default '1', DROP `image`;
```

Table: jos\_fb\_messages

Upgraded table is missing several keys. The clean install has the following extra fields defined as keys:  
parent, thread, catid, userid, ip

```
ALTER TABLE `jos_fb_messages`  
  ADD KEY `thread` (`thread`),  
  ADD KEY `parent` (`parent`),  
  ADD KEY `catid` (`catid`),  
  ADD KEY `ip` (`ip`),  
  ADD KEY `userid` (`userid`);
```

Table: jos\_fb\_moderation

catid and userid are primary keys on the clean install, but not the upgraded table

```
ALTER TABLE `jos_fb_moderation` ADD PRIMARY KEY (`catid`,`userid`);
```

Table: jos\_fb\_sessions

userid is a primary key on the clean install, but not the upgraded table

```
ALTER TABLE `jos_fb_sessions` ADD PRIMARY KEY (`userid`);
```

Table: jos\_fb\_subscriptions

thread and userid are keys on the clean install, but not the upgraded table

---

```
ALTER TABLE `jos_fb_subscriptions`  
  ADD KEY `thread` (`thread`),  
  ADD KEY `userid` (`userid`);
```

Table: jos\_fb\_users

userid is a primary key on clean install, but not the upgraded table  
birthdate default value is 0001-01-01 on clean install, but 0000-00-00 on the upgraded table

```
ALTER TABLE `jos_fb_users`  
  MODIFY `birthdate` date NOT NULL default '0001-01-01',  
  ADD PRIMARY KEY (`userid`);
```

This work has been somewhat complicated for me due to our site being moved to a new hosting company and domain name.

We had a problem with image and file attachments not showing up in the forums. This was caused by two issues:

The absolute path for our base Joomla! directory has changed.  
The domain name for our website has changed

NB: We moved site, then upgraded Fireboard, only then was the attachment problems noticed, so note the new and old style fireboard locations for files and images, as these fixes were applied after the 1.0.4 upgrade.

The first problem (Moving Joomla base directory) was fixed with the below:

```
UPDATE jos_fb_attachments SET filelocation=(REPLACE(filelocation,  
'old_joomla_base_path/components/com_fireboard/uploaded',  
'new_joomla_base_path/images/fbfiles'));
```

The second problem (Moving site to a new URL) was fixed with the below:

```
UPDATE jos_fb_messages_text SET message=(REPLACE(message,  
'http://oldurl.example.com/components/com_joomlaboard/uploaded',  
'http://newurl.example.com/images/fbfiles'));  
UPDATE jos_fb_messages_text SET message=(REPLACE(message,  
'http://oldurl.example.com/components/com_fireboard/uploaded',  
'http://newurl.example.com/images/fbfiles'));
```

We had several instances of attached image urls referring to com\_joomlaboard, hence why it is included above, if you only ever had fireboard installed, you can ignore the line mentioning joomlaboard.

Cheers,

Jag

I am having the same problem. "There are no forums in this category!" I'm sure the answer is here but I am not programmer so all the db stuff is over my head. I now have a forum offline while 1500 members have nothing to do? I'm at a loss. I've ran every script here and still the same results? "There are no forums in this category!". I would be willing to pay someone to help. I just need to get this taken care of. I've never had this much trouble upgrading a component and I've been using Mambo/Joomla for years. Please help..

I am pleased to report that I finally made the upgrade from 1.0.0(Beta) to 1.0.3 thanks to the efforts of grumblemarc who generously offered to look at my backend (not everyday I allow people to look at my backend but I was grateful he did). I believe that he ran the sql and had the same problem as me with the "No Forum In this Category". He then ran the sql upgrade script for 1.0.1 and that seemed to do the trick. I think this was more or less advised by bpowers84 too. Anyway I am up to date and very pleased with both the upgraded component and with all the help I received through this forum. Thank you.

This is from the second page in this very thread. :S Have you tried this?

Thanks...that cleaned up version worked great...1.0.4 runs smooth with it and it did indeed add the additional needed table.
