
Danish translation \"light\" 1.0.3 stable

Posted by walaw - 2007/10/11 11:57

Hej there!

Iv'e just updated my danish translation file for FIREBOARD 1.0.3 STABLE
Iv'e (hopefully) copied all new parts in the 1.0.3 english.php to my danish.php
Iv'e JUST TRANSLATED FRONTEND-TEXT(most important for me). New features in the backend still talk english, but doesn't look ugly anymore (it does if you have the old danish.php).

INSTALLATION:

After upgrading to FIREBOARD 1.0.3 STABLE or installing FIREBOARD 1.0.3 STABLE,

1) download link: danish-language-fireboard-103-stable.rar

2) unpack/unrar danish-language-fireboard-103-stable.rar (with unrar on linux / winrar on windows)

3) upload/copy ../administrator/components/com_fireboard/language/danish.php to:

`/joomla/administrator/components/com_fireboard/language/`

4) upload/copy ../components/com_fireboard/sources/fb_timeformat.class.php to:

`/joomla/components/com_fireboard/sources/`

5) upload/copy ../components/com_fireboard/template/default/message.php to:

`/joomla/components/com_fireboard/template/default/`

IMPORTANT: Translation is NOT finished (especially not for the backend!)
But it works fine here - if you experience any problems - post here.

Regards, Ole (walaw)

Thanks allot to the danish translator team..

It's a huge translation so i was thinking perhaps everybody could help translating whats left, we could do it online here, post whats left to translate and the danish commuity could go at it!

A little idea, considering that norway has a official translation perhaps we could translate from norwegian to danish instead of english to danish i think it would make it eaiser

regards amedeus aka amed

Hey

Installed translation, no problem, good job!
However, at the very top of the forum page i get this;

```
elseif ($timestamp == 0) { return 0; } $timestamp = time(); return $timestamp; } ?>
```

How do I get rid of that?
And why am I typing in english in a danish forum? :woohoo:
