
database error when trying to integrate with...

Posted by begem0t - 2007/10/13 18:10

hello, i am not sure if this is the proper category for my question, sorry for this, but i have the following problem:

when trying to integrate the FB with Group Jlive component, when i try to create new group, it says:

DB function failed with error number 1048

Column 'time_last_msg' cannot be null SQL=INSERT INTO jbg_fb_categories (parent, name, cat_emoticon, locked, alert_admin, moderated, moderators, pub_access, pub_recurse, admin_access, admin_recurse, ordering, future2, published, checked_out, checked_out_time, review, hits, description, headerdesc, class_sfx, id_last_msg, numTopics, numPosts, time_last_msg) VALUES ('28', '?@>1=0', 0, 0, 0, 1, 62, 0, 0, 0, 0, 1, 0, 0, 0, now(), 0, 0, "", "", "0', '0', '0', NULL)

this is connected with the FB integration, because when a new group is created a forum category for the group should be created at the same time... any idea why the automatic creation of category does not happen? i'll be thankful :unsure:

You didn't mention that you have already successfully created 2 groups already without error.

I had two groups and the integration worked for them.

Sounds more like a GJ error and not an FB one since FB has no group creation features.

This is your problem

Column 'time_last_msg' cannot be null

Hopefully someone in the GJ forum will be able to answer you.

yes, i found that with previous version of GJ it works, so it is really not a FB problem... you can delete this thread. thanks anyway
