
Starting new threads from outside Fireboard

Posted by riceguitar - 2007/10/14 07:04

So I've seen the Mambot that will automatically start new threads or link to a thread if it's already been created. I have a blog (in Wordpress) and I'd like to have all the commenting done in Fireboard. So I'd ideally like to have it link to fireboard and look for a thread or if that thread subject doesn't exist for it to create a new one. Basically same concept as the Mambot, but from outside Joomla. Any ideas? TIA!
