## text input error and save path error.

Posted by wasabi - 2007/10/15 03:31

---

I am running fireboard on a counter strike clan site. recently i started noticing some of the words in the posts were being altered by the system. When a word such as "player" "metamod" "eventscrip" is posted, it shows up as "p\_layer" "\_meta\_mod" and "\_event\_scrip" how do i fix this?

also, when i look under system info in joomla, i see that "Session Directory /" is marked as Unwriteable. Joomla was installed using fantastico on my webhost. i don't have direct access to the php.ini to change the path. how do i fix this error?

=====
