
Solved: Problem with Users / Moderators / Login

Posted by RasCas - 2007/09/06 20:37

Just for info, the fixed fireboard.php from the cbe homepage solved all issues.

---- original post ----

Hi, i just installed 1.0.3 and i got some problems with the users.

I am using CBE and fireboard sees the total numbers of Users, but only after they first logged into the board they get visible in user administration.

The users must log in via the cbe Modul, the links in the board open a login page but no one can log in there. Same problem with the register link.

And third how do i assign moderators to a board?

My user has the status moderator, but i cannot find where to activate the user as moderator for a board.

There are two ways to delegate moderators to a forum. The way I have set this up is by going to user administration in the back end, searching for the user and apply them as a moderator to the specific boards using the list menu.
