
Editor Textarea Dimensions

Posted by mareluna - 2007/10/18 16:45

I have installed Fireboard 1.0.3 together with template dark_blue.

But I have two setting problems:

1. Textarea in the editor (please see enclosed screenshot). The text area is too small
2. Some columns have a wrong dimensions

I don't find the file where modify the above settings, can you help me ?

Thank You !!! http://www.bestofjoomla.com/images/fbfiles/images/FB_textareasmall.jpg

Incompatible template. Check the " FireBoard Graphics and Templates" forum and review the stickies.

In fact, I downloaded the updated file for 1.0.3 version and everything is ok now !!

Thank you for you assistance.

Only one question: how can i change the color of the text of the buttons at the end of the editor ? Now is dark grey on dark grey background... (see enclosed image)

Thank you once more.

in the forum.css edit

```
table#fb_postmessage .button
```

change the color tag to any color you want

Thank You !!! Everything solved !!!

Very good components and assistance.

Have a nice day.
:lol:

I have this same issue. I currently have the beta version of fireboard installed. I am new to this stuff and feel uncomfortable upgrading to the newer version right now. Can this textetara issue with the small white editing box be fixed? I am using the DARK BLUE template aswell Or do i need to go with another template?

3 things.
1-Don't use the beta version. Install/upgrade to 1.0.3.
2-Use compatible templates for the version you are running.
3-DO NOT use Joomla style in the config.

There are many threads on the upgrade process. You should have all the files you need to upgrade in the 1.0.3 zip.
