
IPB 2.3.x Convert to Fireboard

Posted by remorze - 2007/10/16 14:44

Well I am presently running a small IPB forum which has about 500 posts, and 30 users. its a gaming clan so the data there is quite important. I would like to convert my IPB to joomla's fireboard. I have heard that there are two ways of doing this. The first one is

IPB 2.3 - SMF - FireBoard

IPB 2.3 - vBulliten - FireBoard

IPB 2.3 - PhpBB - FireBoard

I am not too fussy about loss of attachments because there aren't too many of them. I would just like to ensure that all the data is kept. Password resets are fine too.

But could I have the best possible way? Along with the required tools/hacks I can easily purchase a copy of vBulliten because my freind is on the vBull team, so yah. Please get back to me ASAP!!!

Thanks
