
Badwords

Posted by UniqueOperator - 2007/10/25 03:25

When posting a thread, received error on bad word filtering.
error is:

The bad word filter file does not exist in /component/com_fireboard/templet/default/view.php line 37.

Temporally disable the filter and this mitigated the error, but ...

The reference in the error points to:

```
// Check if need to include class for bad word filtering
if ($fbConfig) {
    require_once ('components/com_badword/class.badword.php');
}
```

I'm lost since this component does not exist and is not included in the FB 1.0.3 or patches.

any idea what's missing in the new release and how can I fix it?
